

WASTE KHORO 2019: Asbestos and Land Remediation Summit

"Good Green Deeds towards a Recycling Economy and Sustainable Land Remediation"

Integrated Pollution Prevention

- Day (19 September 2019)
- Topic: Collaborative Approach in Waste Management and Classification

Challenges

- Government must extend the **red carpet** to industry that wants to help NOT **red tape**
- Lack of Participation by Stakeholders in providing information for the survey
- The New NWMS must be properly costed to succeed which was the problem with the last strategy
- The strategic objectives of the new NSW are writes as outcome targets
- It seems the review of implementation of WCMR is being done to introduce amendments when hardly 6 years have passed since promulgation.

Discussion items

- Improving participation and consultation in the WCMR Implantation Review Project
- Improving collaboration between government, industry, communities and getting political buy-in
- The cost of the associated with WCMR and associated N&S should NOT include secondary infrastructure

Recommendations

- The evaluation of the WCMR implementation review should not be driven by cost but by objectives
- The New NWMS must be properly costed to succeed
