| | (For official use only) |
| File Reference Number: | 12/9/11 |
| NEAS Reference Number: | |
| Date Received: | |

Risk Assessment for an application for exclusion of waste stream or portion of waste stream in terms of the National Environmental Management: Waste Act, 2008(Act No.59 of 2008), as amended.

Kindly note that:

1. This form is current as of 01 April 2021. It is the responsibility of the applicant to ascertain whether subsequent versions of the form have been published or produced by the competent authority.
2. The information must be typed within the spaces provided in the form. The sizes of the spaces provided are not necessarily indicative of the amount of information to be provided. Spaces are provided in tabular format and will extend automatically when each space is filled with typing.
3. Incomplete forms (including information as required in the application form may be returned to the applicant for revision and the inclusion of additional information.
4. Unless protected by law, all information filled in on this application will become public information on receipt by the competent authority. Any interested and affected party should be provided with the information contained in this application on request, during any stage of the application process.

| BACKGROUND INFORMATION | |
|------------------------|--|
| APPLICANT | Tronox Mineral Sands (PTY) Ltd., Namakwa Sands Smelter Operation |
| CONTACT PERSON | JJ Le Roux |
| NAME | JJ Le Roux |
| ADDRESS | P.O Box 435, Vredenburg, 7380 |
| E-MAIL ADDRESS | jj.leroux@tronox.com |

| | 32° | 57' | 49.6" | 18° | 02' | 45.7" |
| | 32° | 57' | 47.6" | 18° | 02' | 45.6" |
| WASTE STREAM OR PORTION OF A WASTE STREAM TO BE EXCLUDED FROM THE DEFINITION OF WASTE | Desulphurised Slag | | | | | |
| BENEFICIAL USE/S | <ul style="list-style-type: none"> • Aggregate • Concrete product aggregate • Road base materials • Construction fill • Asphaltic concrete and other bituminous mixtures • Brick making • Cement production alternative raw material | | | | | |

| WASTE GENERATING PROCESS | |
|---|--|
| DETAILED DESCRIPTION OF WASTE GENERATING PROCESS ¹ | <p>Furnaces</p> <p>The smelting process comprises of the carbonaceous reduction of ilmenite to produce titania desulphurised slag with a titanium dioxide content of 87% and iron with a carbon content of 2.5%. The ilmenite is sourced from the Mineral Separation Plant (MSP) and stored in silos. From these silos it is conveyed to the ilmenite furnace day bins.</p> |

¹ A process flow chart must be attached with this form for the process description

Anthracite, which is mainly imported from Vietnam and stockpiled, acts as the reductant.

Ilmenite and anthracite are continuously fed in controlled ratios through the hollow electrode and side feed ports into the operating furnace. The furnaces are direct current electric arc furnaces. The reduction of ilmenite is an endothermic reaction.

Slag and iron are tapped from the furnaces into slag pots and iron ladles, respectively. The iron ladles are sent to the iron plant for treatment. The slag pots are taken to the slag cooling area. [note this slag referred to above is not the desulphurised slag assessed in this application]

Iron Plant

Iron is tapped from the furnaces at a temperature of approximately 1 450°C into 32-ton refractory lined ladles and transported to the Iron plant for treatment.

The primary product from the iron plant is high and low silicon pig iron. At the Iron Plant the ladle with iron is taken to the injection station to be recarburised and desulphurised. Carbon is injected to increase the carbon content from approximately 2.5% to 4.1% max. Calcium carbide is injected to decrease the sulphur content to below 0.012%. Silicon carbide is also added to the molten iron to increase the silicon content. The amount of silicon carbide required depends on whether high or low silicon pig iron is produced.

The molten Iron is then transferred into a pig caster machine to form pig iron blocks which get cooled using water and then stockpiled for storage. The ladle is then cleaned using a front-end loader with a ladle scraper attachment and whatever is left behind from the cleaning process is what is referred to as the Desulphurised slag. The Desulphurised slag is then left to air cool on the iron plant isle and then after placed in a designated screening yard where bigger skulls (large pieces of iron which forms from spillages and form on the sides of the pig caster in the iron plant). These are good quality iron pieces which are recycled back into the process are recycled, and the finer material is left behind and stockpiled (for disposal).

Refer to process flow diagram as appendix 1 hereto

| 9. Specific target organs toxicity following repeated exposure | 1 | H372: STOT-R 1 - H372 - Causes damage to Lungs by inhalation through prolonged or repeated exposure |
| Environmental Hazards | | |
| Acute aquatic toxicity | 3 | H402: Harmful to aquatic life |

Hazard statements

H335: May cause respiratory irritation

H350: May cause cancer if inhaled

H372: Causes damage to organs (lung/respiratory system) prolonged or repeated exposure (inhalation)

H402: Harmful to aquatic life

Precautionary statements

P201: Obtain special instruction before use

P202: Do not handle until all safety precautions have been read and understood

P260: Do not breathe dust

P261: Avoid breathing dust/ fume/ gas/ mist/ vapours/ spray

P285: In case of inadequate ventilation wear respiratory protection

P273: Avoid release to the environment

RISK ASSESSMENT WITHOUT AND WITH MITIGATION

| Activity | Risk Description | Environmental Receptors | Impact | Assessment of Risk | | | Significance | | |
|-----------------------------|--|---|--|--------------------|-----------|----------|--------------|----|----------|
| | | | | Probability | Magnitude | Duration | | | |
| | | | | | | | Scale | | |
| Desulphurised Slag storage | Dust generation and subsequent inhalation exposure <u>without</u> mitigation | Receptors in the surrounding environment via inhalation pathway | Impact on air quality and on human health via inhalation | 3 | 6 | 5 | 2 | 39 | Moderate |
| | Dust generation and subsequent inhalation <u>with</u> mitigation (e.g water sprays or other dust suppressants where relevant, wearing of PPE(dust mask and safety glasses) | | | 1 | 2 | 5 | 2 | 9 | low |
| Desulphurised Slag handling | Potential for stockpiled material to enter the surrounding environment <u>without</u> mitigation | Surface water, soil, and groundwater contamination | Impact on aquatic biota and water quality | 5 | 6 | 2 | 2 | 50 | moderate |
| | Potential for stockpiled material to enter the surrounding environment <u>with</u> mitigation(eg Slag must only be stored on an impermeable surface). | | | 1 | 2 | 2 | 2 | 6 | low |
| Desulphurised Slag handling | Potential for desulphurised slag to generate dust during loading, handling, and | Receptors in the surrounding | Impact on air quality and on human health via inhalation | 3 | 6 | 5 | 2 | 39 | moderate |

| Activity | Risk Description | Environmental Receptors | Impact | Assessment of Risk | | | | Significance |
|----------|--|--|---|--------------------|-----------|----------|-------|----------------|
| | | | | Probability | Magnitude | Duration | Scale | |
| | unloading, <u>without</u> mitigation | environment via inhalation pathway | | | | | | |
| | Potential for desulphurised slag to emit dust during loading, handling, and unloading, <u>with</u> mitigation (e.g. water sprays or other dust suppressants where relevant, wearing of PPE(dust mask and safety glasses) | | | 2 | 2 | 5 | 2 | 18 low |
| | Spillage during handling and transfer resulting in interaction with storm water <u>without</u> mitigation | | | 3 | 8 | 2 | 2 | 39 moderate |
| | Spillage during handling and transfer resulting in interaction with storm water <u>with</u> mitigation (eg. Any material spilled must immediately be recovered and placed on the stockpile, back into the process, or disposed of lawfully). | Surface water, soil, and groundwater contamination | Impact on aquatic biota and water quality | 1 | 2 | 2 | 2 | 6 low |

| Activity | Risk Description | Environmental Receptors | Impact | Assessment of Risk | | | Significance | | |
|--|--|---|---|--------------------|-----------|----------|--------------|-------|----------|
| | | | | Probability | Magnitude | Duration | | Scale | |
| Transporting of desulphurised slag | Potential for desulphurised slag dust entrainment by wind <u>without</u> mitigation | Receptors in the surrounding environment via inhalation pathway | Impact air quality and on human health via inhalation | 4 | 2 | 5 | 2 | 36 | moderate |
| | Potential for desulphurised slag dust entrainment by wind <u>with</u> mitigation (covered load bay) | | | 1 | 2 | 5 | 2 | 9 | low |
| Transporting of desulphurised slag | Spillage during handling and transfer resulting in interaction with storm water <u>without</u> mitigation | Surface water, soil, and groundwater contamination | Impact on aquatic biota and water quality | 2 | 8 | 2 | 2 | 24 | low |
| | Spillage during handling and transfer resulting in interaction with storm water <u>with</u> mitigation (eg. apply waste management controls as detailed in the risk management plan. | | | 1 | 2 | 2 | 2 | 6 | low |
| Desulphurised Slag Processing (crushing, screening, etc) | Dust generation and subsequent inhalation exposure <u>without</u> mitigation | Receptors in the surrounding environment via inhalation pathway | Impact air quality and on human health via inhalation | 4 | 6 | 5 | 1 | 48 | moderate |
| | Dust generation and subsequent inhalation <u>with</u> mitigation (e.g. water sprays or other dust suppressants where relevant, wearing of | | | 1 | 4 | 5 | 1 | 10 | low |

| Activity | Risk Description | Environmental Receptors | Impact | Assessment of Risk | | | | Significance | |
|---|--|---|---|--------------------|-----------|----------|-------|--------------|----------|
| | | | | Probability | Magnitude | Duration | Scale | | |
| | PPE (dust mask and safety glasses)) | | | | | | | | |
| Desulphurised Slag management / beneficiation | Dust generation and subsequent inhalation exposure <u>without</u> mitigation | Receptors in the surrounding environment via inhalation pathway | Impact air quality and on human health via inhalation | 3 | 6 | 5 | 2 | 39 | Moderate |
| | Dust generation and subsequent inhalation <u>with</u> mitigation (e.g. encapsulation) | | | 1 | 4 | 5 | 2 | 11 | low |
| Desulphurised Slag management / beneficiation | Potential for the beneficiated material, or leached constituents thereof, to enter the surrounding environment <u>without</u> mitigation | Surface water, soil, and groundwater contamination | Impact on aquatic biota and water quality | 4 | 6 | 5 | 2 | 52 | moderate |
| | Potential for the beneficiated material, or leached constituents thereof, to enter the surrounding environment <u>with</u> mitigation (e.g. encapsulation) | | | 1 | 2 | 5 | 2 | 9 | low |

The following factors and criteria must be used to assess the impacts of the activities:

| CRITERIA | |
|----------------------|--|
| Magnitude (Severity) | Duration |
| 10 – Very high | 5 – Permanent (longer than 10 years) |
| 8 – High | 4 – Long term (5 – 10 years) |
| 6 – Moderate | 3 – Medium term (12 months to 5 years) |
| 4 - Low | 2 – Short term (< 12 months) |
| 2 - Minor | 1 – Immediate |
| Scale | Probability (Likelihood) |
| 5 – International | 5 – Definite |
| 4 – National | 4 – Highly probable |
| 3 – Regional | 3 – Medium probability |
| 2 – Local | 2 – Low probability |
| 1 – Site only | 1 – Improbably |
| 0 – None | 0 - None |

Magnitude

Measures the size of the impact

Duration

Duration refers to the lifetime of the impact i.e. how long it will last

Scale

The scale refers to the extent of the impact

Probability

The probability refers to the chance of the impact to occur. The potential impact could be most likely to occur, unlikely, etc.

Assessment of Significance of Impact

Significance rating of the potential impact illustrates the importance of the impact itself. The size of the area affected by pollution may be extremely high but the significance of this effect is dependent on the concentration or level of pollution in that area. In order to determine the significance of an impact, the following method should be used:

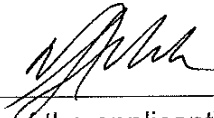

$$\text{Significance (S)} = (\text{Magnitude} + \text{Duration} + \text{Scale}) \times \text{Probability}$$

The values of S must then be categorised as follows:

| RATING | | DESCRIPTION |
|------------|-----------------------|---|
| SP > 60 | High significance | An impact which could influence the decision about whether or to proceed with the activities regardless of any possible mitigation |
| SP 30 - 60 | Moderate significance | An impact or benefit which is sufficiently important to require management and which could have an influence on the decision unless it is mitigated |
| SP < 30 | Low significance | Impacts with little real effect and which will not have an influence on or require modification of the activities |
| + | Positive impact | An impact that is likely to result in a positive consequence/effect |

I, Marius Vlok (the Applicant) hereby declare that I have read the completed Risk Assessment form and hereby confirm that the information is, to the best of my knowledge, true and correct.

Furthermore, I declare that I am fully aware of my responsibilities in terms of the Waste Exclusion Regulations, and that failure to comply with these Regulations may constitute an offence in terms of the National Environmental Management: Waste Act, 2008 (Act 59 of 2008).
