Discussion Points

- Challenges with regards to mercury.
- The major identified uses and sources of mercury emissions and releases;
- The development of inventories of mercury
- Alternatives to mercury in products
- Collaboration possibilities with other Partnership Areas, Local Authorities and Private-Sectors in order to build capacity for the management of mercury
- Resources and experiences to be mobilized for ESM of mercury waste
- Available technologies and development of effective technologies
- Collection/recycling systems for used products containing mercury established
- The possibility of the formalization and/or regulation of miners involved in artisanal and small-scale gold mining?

Way Forward
